## Natural Disasters and their management.

A natural disaster is an unforeseen occurrence of an event that causes harm to society. There are many natural disasters that damage the environment and the people living in it.

Nature possesses the character of a special balance in which all living beings live together in harmony with their environment. But whenever this balance is disturbed, we see the disastrous from of nature which wreaks havoc upon this world. Natural disasters come in various forms like earthquakes, tsunami, storms, cyclones, droughts etc. These disasters have always occurred throughout history but the current threat of climate change has severely increased its risks. Man has to learn that he cannot control nature and his life should revolve around the conditions present in the environment and not the other way around.

Human lives and property are affected for a long time after it occurs. The number of cases is increasing worldwide

every day. it is because of the over-exploitation of natural resources by mankind. Deforestation, which removes vegetation from an area, can increase the risk of natural disasters. Trees and other vegetation hold the upper layer of soil in place, which prevents erosion and landslides. When these plants are removed, the ground becomes more vulnerable to being swept away by heavy rainfall or other natural forces.

Specifically, disaster management is about organizing and directing resources to cope with a disaster and coordinating the roles and responsibilities of responders, private sector organizations, public sector agencies, non-profit and faith based organizations, volunteers, donations. management cycle-

Back to nature.....

I love to dwell in forest wild,  
where giant pine trees pierce the sky,  
A beauty spot where Nature smiled  
A fitting place to live and die.

### Natural Disasters & their Management

Nature has its various manifestations such as calm & aggressive both. When the nature shows its calm side, it is loved by all, of course! On the other hand, when nature shows its ferocious sides, devastations takes place.

Natural Disasters are the calamitous situations that arises & causes damage & loss of vegetation. The disasters are of two types - Natural & man-made. The natural disasters are uncontrollable & includes very deadliest disasters such as floods, earthquakes, tsunami, drought & volcanic eruptions, etc. Furthermore man-made disasters are those which are caused by technological hazards such as oil spills, road accidents, fires, Nuclear explosions, etc.

The Disaster, may it be a natural or man-made, has always endangered the life of all the living-beings on the earth. A recent report suggests that the intensity & frequency of such disasters is increasing day by day! Once a disaster takes place, it affects all the castes, creeds, communities & countries.

One can surely take precautions to avoid the loss of lives from such disasters as they can't be avoided tot-

ally. The NDMA (National Disaster Management Authority) of India monitors the disasters that took place in the country. It also organises various programs that reduces & mitigates the risk of effects that happen after a disaster & takes precautionary actions against it.

The role of every individual in Disaster management is to understand the resources & responsibilities required to take efficient actions during emergency situations & to educate everyone about it. for instance, everyone must know that to hide under a bed or table during an earthquake, To reduce private transport for preventing global warming, To plant more & more trees which will reduce the temperature, To save water that will prevent drought-like conditions & to avoid overcrowding of river banks that will not cause harm to lives of people during flood & many more measures can be taken.

The five stage cycle of disaster management includes Prevention, mitigation, preparedness, Responsiveness & Recovery. Once, every citizen of the country is prepared & educated about how to handle such situations, He/she can surely save the lives of many living beings!

Nature has various magnifications of gentle and aggressive we can also see that there are two type of Nature that are clams and fires everyone love clams region whenever the yinetous region take place it prevent lots of damage and surrounding deadline

however similiarly that is true that we cant prevent fires Natural disaster but it also says that natural disaster are very harmful and dangerous disaster it is not predictable it is almost there it whenever it take place we cant say how much crush and damage will occur.

The Main reason behind that natural disaster take place due to pollutant region population countries, braking of natural product, yarming agriculture, cutting down of trees and more. because of all these natural disaster occurs and they causes are, such as volcanic eruption Taking fire, earthquake, Tsunami, and these thing that can occur due to natural disaster it is also harmful for animal as well as for human even the clams region people loves but the yired region people never interrogate people stay far from Natural disaster

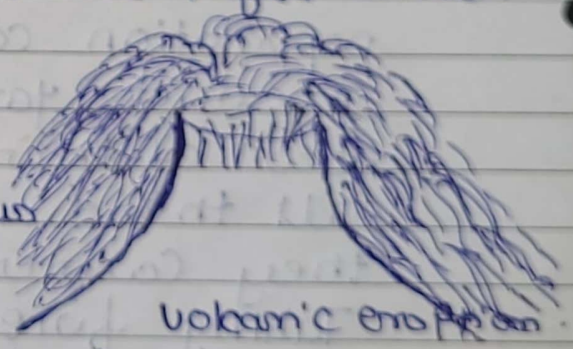

from where even it take place in natural disaster the earthquake Tsunami floods and etc are taken place even in india the state is kenala in 2016 The kenala state has suffer from Natural disaster process

To prevent these natural disaste the best way that is to reduce pollutant make your city aware and before earth quake or Natural disaster take place be aware and be prepare

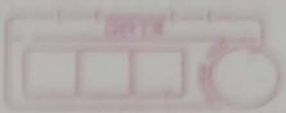

Planting Trees redocing pollutant can bring the country in safe water same water can prevent from natural disaster There are Many types of disaster such as Man Made disaster, natural disaster and Many More Disaster

But Natural disaster is harmful than Manmade disaster

Volcanic eruption is one of the most dangerous and harmful present that can cause Many people life style is deadline in a few second even human life as well as animal life and it can prevent from one place to another region or place also so people are advised that from there region please be far as you can.

volcanic eruption

Major cause of Natural disasters are caused and caused by human either animals

like, flood, Tsunami, Volcanic eruption we can't control all these problem because they are occur naturally.

But we can save our life from all these from reducing pollutant area, No cutting of tree, Saving trees, Saving water and Many more etc. No Garbage waste No crud city reducing vehicle pollution it can prevent safe life for Many years.
